

Sample Title That Should Stay Inside The Page

This paragraph verifies that the watermark is now an overlay only and does not shift the active text cursor. The left margin should remain intact, the top spacing should remain near the configured margin, and the body text should wrap normally inside the page boundaries.

A second paragraph confirms the same behavior lower on the page. The watermark may still be visible, but it should no longer push content off the left edge or down into the page.

Preview document only, not official
